# SELECTION OF STEEL STRUCTURE FOR THE BEST PERFORMANCE OF MYANMAR CONSTRUCTION INDUSTRY

Engr. TIN SOE [ PE, ACPE, MCM, MBA, PGDBA, DMA, BE ( Civil )], PhD ( Thesis )

RSIM, Yangon, Myanmar

August, 2024

## ABSTRACT

Construction work is associated with organizational initiatives in response to the demands of a knowledge- based, skilled- based and experienced- base technology in which the potential value of knowledge as a source for competitive advantage is recognized. However, the lack of a common understanding about knowledge itself, its characteristics and how it is constructed has led to diverse approaches about how to 'manage' it. This study presents a critical overview of traditional and contemporary Construction Management (CM) approaches, with using steel structures instead of reinforced concrete, timber and other structure by the revolutionary change management action. This choice of steel structured in Myanmar construction industry, has been regulated and in a completely different manner compared to the conventional construction structures that is reinforced concrete structures, thus effective business and engineering management as well as construction management, the

strength of design, construction methods, statements and most importantly the cost, time, quality and workability implications. As a result, a framework of performance management has been introduced that can be utilized as a management control system for managing and evaluating performance of steel structure construction organizations. Since in developing the framework two different frameworks have been used and some other perspectives have been added based on experience, the study can be decided as a particular contribution to the field. Keywords: Performance Management, Steel Structures, Reinforced Concrete Structures, Construction Industry.

## ABSTRACT

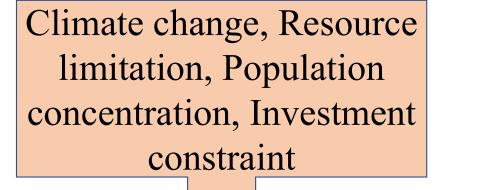

- construction work is a knowledge based, skilled based and experienced base technology
- the lack of a common understanding about knowledge had led to diverse approaches
- this study presents a critical overview of traditional and contemporary construction management (CM) approaches
- using steel structures instead of reinforced concrete timber and other structures by the revolutionary change management action
- the choice of steel structured in myanmar construction industry
- compared to the conventional construction structure
- effective business and engineering management as well as construction management
- strength of design, construction methods, statements and most importantly the cost, time, quality and workability implications

<u>Research Aim:</u> "To explore the appropriate performance management framework which construction organizations in selection of steel structure for their future performance."

Research Objectives:

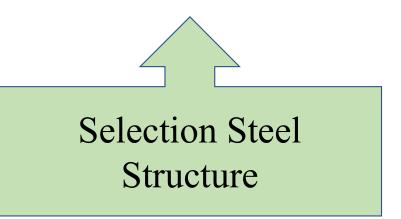

- (1)To analyze the existing performance management system (PMS) in steel structure construction industry.
- (2)To recognize the most appropriate performance measures for steel structure construction organizations.
- (3)To develop a framework of performance management for steel structure construction industry based on the defined performance measures.Research Questions:
- (1)What is the existing performance management system (PMS)?
- (2)What is the most appropriate performance measures for steel structure construction industry?
- (3)What is a framework of performance management for steel structure

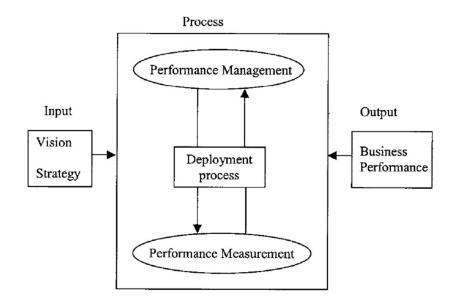

Development of Building and Infrastructure of Myanmar Construction Industry

Presenter: MCM Candidate-Engr. TIN SOE [ PE, ACPE, MBA, PGDBA, DMA, BE (Civil)-RIT] Student ID: LC 000 130 000 055

**Figure :** Fields of Contribution and Relevance (Source: Researcher, Cited Bekdik, 2017)

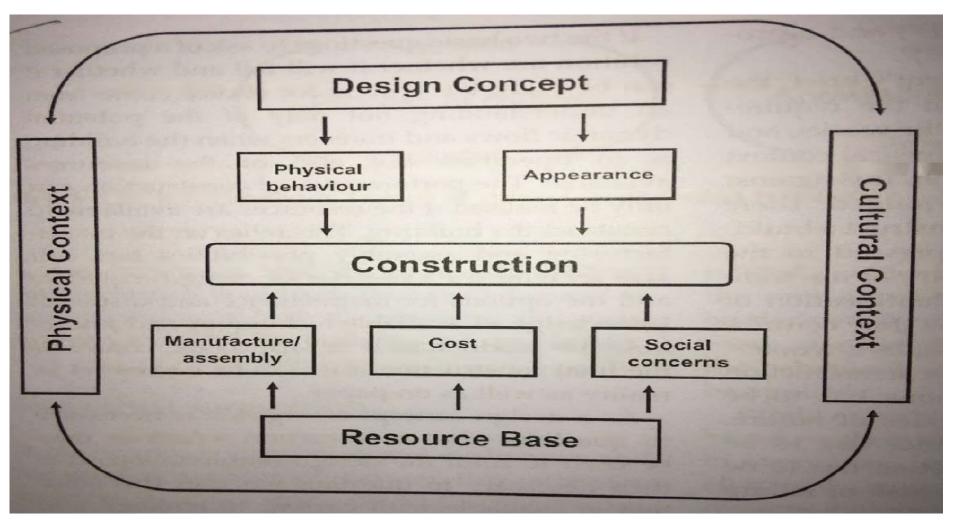

Figure : Framework of Analysis. (Source: Bryan, 2005)

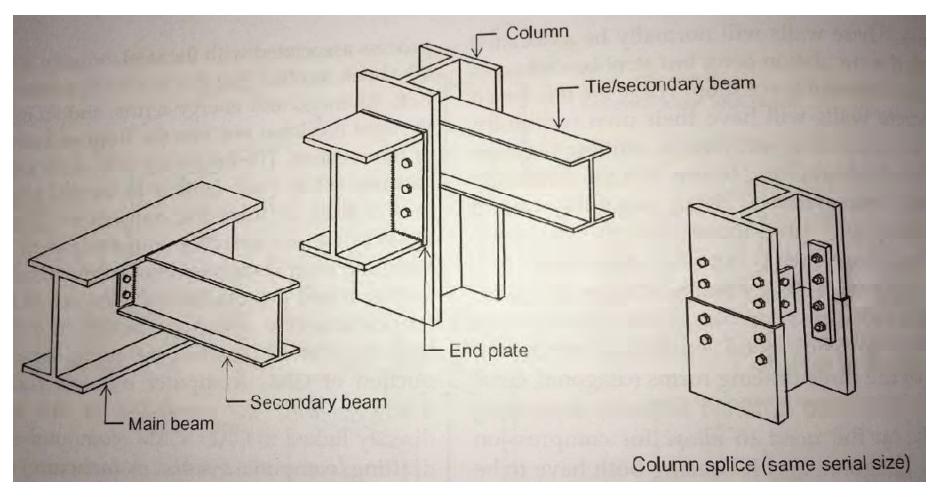

Figure : Structural Steel Bolted Connections (Source: Bryan, 2005)

### **DRIVERS OF PERFORMANCE**

### A. Leadership: Adapted from EFQM model (Gomez et al, 2015)

- 1. Leaders' role in developing clear objectives
- 2. Leader's improvements within project processes
- 3. Communicating leaders directly with stakeholders and employees

### B. Strategic management and planning: Adapted from EFQM model

### (Gomez et al, 2015)

- 1. Strategy of project selection
- 2. Strategy of partner selection
- 3. Strategy of market selection
- 4. Strategy of client selection
- 5. Organizational and project management strategies

### C. Project management (Added)

- 1. Time management
- 2. Cost management
- 3. Quality management
- 4. Human resources management
- 5. Risk management
- 6. Project procurement management
- 7. Claims management
- 8. Knowledge management
- 9. Health and safety management
- 10. Supply chain management

### **D.** Continuous learning: Adapted from BSC Technique

### (Neely et al. 2005)

- 1. Employee training
- 2. Knowledge and information sharing
- 3. Reviewing pat experience
- 4. Taking benefit from other projects' best practice

### E. Innovation: Adapted from BSC Technique (Neely et al. 2005)

- 1. Efficiency of research and development
- 2. Application of IT

### F. External relations (Added)

- 1. Relations with client
- 2. Relations with government
- 3. Relations with labors union
- 4. Relations with other companies

### G. Resources: Adapted from EFQM model (Gomez et al, 2015)

- 1. Financial resources
- 2. Technical capability

### H. Supplier ad partnership: Adapted from EFQM model (Gomez et al, 2015)

- 1. Partner satisfaction
- 2. Supplier satisfaction
- 3. Teamwork culture with partners and suppliers

### I. Feedback: Adapted from EFQM model (Gomez et al, 2015)

- 1. Doing survey among the society and the end users
- 2. Collecting information among stakeholders an employees
- 3. Doing feedback at the beginning and at the end at the end of any process

### **RESULTS OF PERFORMANCE**

### J. Project results (Added)

- 1. Project profitability
- 2. Project health and safety
- 3. Quality of the constructed project
- 4. Client satisfaction
- 5. Project teamwork and harmony
- 6. Society satisfaction to the project

### K. Company results ( Added )

- 1. Financial perspectives
- 2. Company image
- 3. Flexibility of internal processes
- L. People and other stakeholders: Adapted from EFQM

### model (Gomez et al, 2015)

- 1. Identification of the stakeholder needs
- 2. Good communication between leaders and stakeholders

### M. Project end users: Adapted form BSC Technique and EFQM model

### (Neely et al. 2005 and Gomez et al, 2015)

- 1. Identification of the end user requirements
- 2. Translation of end user needs into actions within the project

# Figure (2-2) Five Industry Forces Adapted from Porter (1980) [41] (Source: [2])

Appendix 6 (Source: Sika 2013, P-13)

According to Sika Concrete, twelve types of concrete :

(1) crane and bucket concrete (2) pumped concrete (3) self-compacting concrete (SSC) (4) concrete for traffic area (5) mass concrete (6) monolithic concrete for industrial floor (7) roller-compacted concrete (RCC) (8) slipform concrete (9) sprayed concrete (10) wet precast concrete (11) tunnel segment concrete and (12) semi-dry concrete

For not ordinary or not common/ conventional, sixteen

- (1) waterproof concrete
- (2) corrosion resistant concrete
- (3) frost and freeze/thaw resistant concrete
- (4) fire resistant concrete
- (5) sulfate resistant concrete
- (6) Alkali-silica-reaction resistant concrete
- (7) abrasion resistant concrete
- (8) chemical resistant concrete
- (9) high strength concrete
- (10) shrinkage controlled concrete
- (11) fibre reinforced concrete
- (12) fair-faced concrete
- (13) colored concrete
- (14) underwater concrete
- (15) lightweight concrete and
- (16) heavyweight concrete

- Concrete compressive strength range from 20 N/mm<sup>2</sup> (low-strength fill or foundation material) to 200 N/mm<sup>2</sup> (ultra-high-performance fibre-reinforced concrete).
- Cement type and the use of supplementary cementitious materials will influence the durability, setting time, heat of hydration and therefore peak temperature rise of the concrete.

Lists of "special" concretes :

- 1) lightweight aggregate concrete
- autoclaved areated concrete (AAC)
- 3) foamed concrete
- 4) high-density concrete
- 5) high-strength concrete (HSC)
- 6) high-performance concrete (HPC)
- 7) fibre-reinforced concrete (FRC)
- 8) ultra-high-performance fibre-reinforced concrete (UHPFRC)
- 9) sprayed concrete
- 10) heat-resistant and refractory hydraulically bound concrete
- 11) underwater concrete
- 12) mass concrete
- 13) polymer-modified concrete
- 14) recycled aggregate concrete and
- 15) self-compacting concrete

- Special types of concrete are by definition a composite materials consisting essentially of a binding medium and aggregate particles, and it can take many forms.
- Appendix (7) lists many special types of concrete made with Portland cement and some made with binders other than Portland cement.

Architectural concrete Autoclaved cellular concrete Centrifugally cast concrete Colloidal concrete Colored concrete Controlled-density fill Cyclopean (rubble) concrete Dry-packed concrete Epoxy-modified concrete Exposed-aggregate concrete Ferrocement Fiber concrete Fill concrete	Special types of concrete made with portland cent   High-early-strength concrete   High-performance concrete   High-strength concrete   Insulating concrete   Latex-modified concrete   Low-density concrete   Mass concrete   Moderate-strength lightweight concrete   Nailable concrete   No-slump concrete   Pervious (porous) concrete   Photocatalytic Concrete   Polymer-modified concrete	-	Roller-compacted concrete Sawdust concrete Self-compacting concrete Shielding concrete Shotcrete Shrinkage-compensating concrete Silica-fume concrete Soil-cement Stamped concrete Structural lightweight concrete Superplasticized concrete Utra High Performance Concrete Vacuum-treated concrete Vacuum-treated concrete Vermiculite concrete White concrete Zero-slump concrete
Flowable fill Flowing concrete Fly-ash concrete Gap-graded concrete Geopolymer concrete Heavyweight concrete	Pozzolan concrete Precast concrete Prepacked concrete Preplaced aggregate concrete Reactive-powder concrete Recycled concrete	· · ·	
Acrylic concrete Aluminum phosphate concrete Calcium aluminate concrete Epoxy concrete Furan concrete	Special types of concrete not using portland cent Gypsum concrete Latex concrete Magnesium phosphate concrete Methyl methacrylate (MMA) concrete Polyester concrete	14	Polymer concrete Potassium silicate concrete Sodium silicate concrete Sulfur concrete

The lightweight concrete is called lightweight aggregate concrete, structural lightweight concrete is defined as having and oven-dry or air-dry density less than 2000 kg/m<sup>3</sup> or in the range of 1350 to 1850 kg/m<sup>3</sup> (85 to 115 pcf) and made with aggregates artificial voids with density less than 2000 kg/m<sup>3</sup> or 1920 kg/m<sup>3</sup> (120 pcf).

A Questionnaire to analyze the concept of Fragmentation in perspective of Myanmar Construction Industry/ Projects

Dear Sir/Madam,

As part of my PhD in Management, I am conducting a questionnaire survey to examine the concept of Fragmentation within Construction Industry and Construction projects

Your experience and opinions will be an important contribution projects. the examination problems that Myanmar Construction industry/projects are facing. Furthermore, your feedback will also help problems.

This questionnaire may take your 15 minutes. You may find some terms unknown to you; I therefore have included few definitions in the end of the questionnaire. I would request you to make some would also request you to fill it completely so that we together can contribute to some level in Myanmar Construction sector improvement.

Please note that the information received will be retained confidential and will be utilized for education purpose only.

If you have any query or need any clarification/information about questionnaire, please get in contact with me.

Many Thanks,

A Questionnaire to analyze the concept of Fragmentation in perspective of Myanmar Construction Industry/ Projects

Dear Sir/Madam,

As part of my PhD in Management, I am conducting a questionnaire survey to examine the concept of Fragmentation within Construction Industry and Construction projects.

Your experience and opinions will be an important contribution to assess the fragmentation problems that Myanmar Construction industry/projects are facing. Furthermore, your feedback will also help to analyze the effectiveness of various Management Strategies usually prescribed to deal with those problems.

This questionnaire may take your 15 minutes. You may find some terms unknown to you; I therefore have included few definitions in the end of the questionnaire. I would request you to make some extra time to understand such concepts (if new to you) so that you can answer the questions fairly. I would also request you to fill it completely so that we together can contribute to some level in Myanmar Construction sector improvement.

Please note that the information received will be retained confidential and will be utilized for education purpose only.

If you have any query or need any clarification/information about questionnaire, please get in contact with me.

Many Thanks,

The PMBOK discusses the use of a risk breakdown structure (RBS). An RBS is essentially a modified version of a work breakdown structure (WBS) where the aggregation describes risks instead of activities. This RBS is shown in Appendix (A-11) [Cretu et. al., 2011].
